

ABSTRACT**STACKING MACHINE OF FOLDED CARDBOARD BOXES OR SHEETS**

5 The purpose of the machine is to stack a determined number of folded boxes
to form packages, or a determined number of sheets also to form packages.
It comprises an infeed area (3), a first stacking area (4) and a second
stacking area (5), there being in the infeed area (3) a tilting table (6) which in
accordance with its position allows the folded boxes (2) to pass toward the
10 lower part of the first stacking area (4) where the formation takes place of a
first half package (20) of stacked boxes, or toward the second stacking area
(5), where a second half package (20') of boxes is formed, this second half
package (20') being deposited on the first half package (20) defining a
complete package (20'') of boxes which is carried toward the exterior.
